PROFESSIONAL SUMMARY

Email Developer and Program Manager with 7+ years delivering enterprise marketing technology programs — including production-ready email campaigns, cross-functional campaign execution, and full program ownership for clients including Google Store across 9 international markets and 45M+ recipients. Combines responsive HTML, ESP platform execution, and AI-augmented tooling with rigorous QA discipline, stakeholder coordination, and delivery leadership to ship accurate, on-time campaigns at scale.

CORE COMPETENCIES

Program & Delivery: Cross-Functional Program Management, Campaign Lifecycle Ownership, Scope & Timeline Management, Sprint Planning, Stakeholder Coordination, Launch Coordination, Zero-Defect Release Management

Email Development: HTML5, CSS/SCSS, Responsive Email, Email AMP, Modular Template Systems, Freemarker, Handlebars.js, Jinja

Platforms & Tools: MailChimp, Litmus, Email on Acid, Figma, Workfront, Jira

Data & Personalization: JSON, YAML, Data Extensions, Google User API, Dynamic Content, Segmentation

QA & Testing: Cross-Client Rendering QA, Accessibility (A11y/WCAG), Cross-Device Testing, Regression Testing, Defect Documentation

Additional: JavaScript, jQuery, Bootstrap, AI-Assisted Development, Chrome Extension Development

PROFESSIONAL EXPERIENCE

Email Marketing Specialist (Developer, QA & Project Management)

Jan 2024 – Apr 2026

Rootmark · Full-time · Remote (San Jose, CA)

- Managed scope, timelines, and cross-functional approvals across 2 concurrent client projects and up to 4 simultaneous campaign workstreams, coordinating design, content, and account stakeholders — maintaining zero missed launch dates and consistently delivering ahead of schedule to maximize client review time.
- Served as the sole company representative across development, project management, and QA — managing end-to-end campaign deployment across MailChimp and multiple client ESPs, coordinating directly with stakeholders to align deliverables with marketing objectives, brand standards, and launch timelines.
- Built and shipped a Chrome extension for automated email QA reporting using iterative Claude AI-assisted development — automating validation of links, copy, image assets, AMP email extraction, disclaimer checks, and visual error highlighting — reducing QA review time by 80% (5 minutes → ~1 minute per email).
- Executed QA across 60+ monthly email campaigns spanning international markets, validating HTML standards, ESP configurations, and cross-client rendering.
- Spearheaded development of responsive, interactive (AMP), and A11y-compliant HTML email campaigns across multiple client accounts, ensuring pixel-perfect rendering and accessibility compliance.

Web Developer

Feb 2023 – Jan 2024

Felix Properties, Inc. · Freelance · Hybrid (Sunnyvale, CA)

- ▶ Sole designer and developer on a full website redesign for Casa del Sol Apartments — delivered a multi-page, mobile-responsive site from concept to launch using JavaScript, jQuery, and Bootstrap, still live in production.
- ▶ Managed all client communication, timelines, and deliverables end-to-end as the single point of contact, facilitating weekly stakeholder reviews for design feedback, feature planning, and sprint prioritization — delivering on schedule and absorbing a last-minute Google Maps integration without impacting launch dates.
- ▶ Performed cross-device and cross-browser QA testing across mobile (iOS and Android), tablet, and desktop platforms to ensure consistent rendering and functionality prior to launch.

Email Developer II / QA Analyst

Sep 2021 – Feb 2023

Hawkeye - Google Store · Full-time · Hybrid (San Jose, CA)

- ▶ Designed and managed modular email templates using Handlebars.js, Freemarker, JSON, and YAML — standardizing reusable components and integrating QA best practices to reduce development rework and improve cross-client consistency across the Google Store email program.
- ▶ Translated Figma designs into pixel-perfect, responsive marketing emails and provided feasibility input during creative planning sessions, supporting 3 concurrent campaigns per quarter deployed to 6M+ recipients per send.
- ▶ Executed structured QA across a 12-client testing matrix — Gmail, Yahoo, Thunderbird, Outlook.com, Pixel, iPhone, and Galaxy devices across Firefox, Chrome, and Edge — using Litmus to validate rendering and catch defects prior to deployment.
- ▶ Audited and updated existing email templates to meet A11y compliance standards, improving accessibility across the full Google Store email program.
- ▶ Logged and tracked up to 8 bugs per project per quarter in Workfront with detailed documentation and visual evidence, contributing to post-mortem findings that improved sprint velocity across the development team.

Email Developer I

Jan 2019 – Sep 2021

Hawkeye - Google Products · Full-time · On-site (San Jose, CA)

- ▶ Built 30+ pixel-perfect, responsive email campaigns over tenure using HTML5 and SCSS, supporting hardware launches — including Pixel phones, Nest devices, and Chromecast — across 9 international markets and language variants including US, DE, JP, GB, AU, FR, CA, and IN.
- ▶ Identified and resolved cross-client rendering and delivery issues using Litmus and real-device testing, reducing post-deployment defects by 33% as templates and QA processes matured.
- ▶ Collaborated with project managers to resolve ESP/API-related sending errors, improving campaign delivery reliability and contributing to the defect reduction achieved across the program.

EDUCATION

DeVry University - Bachelor of Science, Computer and Information Sciences

2017
